ABOUT ME

Full Stack Developer with 3 years of studies. I like to work in a team and do personal projects. Developed functional projects including both Front (React.js, Redux, Tailwind) and Back (SQL, PostgreSQL, Express, Sequelize) and hosting them in the cloud (Railway, Netlify, Vercel, Github). I specialize more than anything in Front End roles, full stack development, web development, application development, web design, web content management and the use of agile methodologies for work. I have an advanced level of English in writing, reading and conversation, I am currently studying French at a basic level and my native language is spanish. Also, I always try to create user-friendly solutions by enriching the code with whatever I can.

TECHNOLOGIES

React | Phyton | JavaScript | Node.js | Redux | Express | SQL | PostgeSQL | MySQL | Sequelize | Tailwind | Html y css | GIT | Figma | Scrum | UX/UI | JIRA | Github | VisialStudio | Railway | Velcel | Netlify
